

UI Builder™ for Microsoft® Access™

Evaluation FAQ

Thank you for your interest in UI Builder! Below are answers to several questions that frequently come up when evaluating the product.

Can I import my forms into the UI Builder evaluation copy?

Because the evaluation copy is locked down to protect OpenGate intellectual property, you can only preview the sample forms we have prepared for you. But please be assured that migrating your own application into UI Builder is easy.

Do I need to license a copy of UI Builder for each user or database?

UI Builder licenses are for unlimited use within your own organization. We do not charge an additional fee based on users or the number of databases you create with UI Builder. If you plan to resell or redistribute UI Builder to other businesses, please refer to the next question.

I am a contract software developer, can I include UI Builder in solutions I create for my clients?

Many software developers have chosen to use OpenGate software products to deliver solutions to their clients in less time, including UI Builder. Please refer to our [redistribution licensing page](#) for the most up-to-date pricing and details about which license applies to your situation.

I'm not an expert in Visual Basic, can I still use UI Builder?

Absolutely! We designed UI Builder with you in mind. UI Builder is easy enough for a new Access user to learn in minutes, and powerful enough to help even the most experienced Access gurus.

Do you have special pricing for non-profit organizations?

We support non-profit organizations, and would be pleased to provide free licenses of OpenGate products for use within your organization. Please contact us (orders@opengatesw.net) and be sure to provide proof of your non-profit status within your country.

Who can I contact to ask further questions?

If you have any additional questions during the evaluation, or need more time to evaluate UI Builder, feel free to contact us via email (support@opengatesw.net) or phone (US) 303-330-8434.

About OpenGate Software

OpenGate Software offers world-class business applications and tools for Microsoft Access databases. Our experience ranges from creating mission critical public safety applications for 9-1-1 data processing, to popular Microsoft Access tools used by 1,000's of organizations worldwide. We build solutions easy enough for the average user to understand, and powerful enough to save experienced developers hours of custom work.
