

Puzzability's Puzzle Trifecta – Getting Started

System Requirements

This preview collection of 3 interactive puzzles are comprised of HTML pages and Java applets. In order to enjoy the puzzles, a web browser that supports **JavaScript** and **Java** is required.

Not sure if your web browser is compatible? If your web browser can successfully load and play the puzzles in this collection, then your browser is compatible.

If the puzzles do NOT work in your web browser, then try installing the **Java Runtime** for Firefox, Safari, Netscape, and other compatible browsers:

<http://www.java.com/en/download/manual.jsp>

To access all 100 puzzles, please purchase the complete Puzzle Trifecta from SpiderWorks:

<http://spiderworks.com/software/puzzability.php>

How to Use

The folder called *Puzzability_Preview* (that contains this PDF document and all of the various subdirectories of puzzle files) can be saved to any location on your hard drive that is convenient for you to access. Do NOT move or rename any of the files or subdirectories within the *Puzzability_Preview* folder or else the puzzles may not run properly.

To explore and play the puzzles, open the file called **start_here.html** in any Java-enabled web browser. From that page, you can select puzzles from the table of contents.

For **Instructions** on how to solve the individual puzzle types, click on the "Instructions" link on the Contents page or the "click here" link below any puzzle.

Answers for all the puzzles can be accessed from the Contents page or from the "Answer" link below each puzzle.
